Old folding machines like this one can be tough and sturdy, but their electrical control systems usually aren’t.

Pathfinder controls will give your folding machine new life, improve its performance and make it capable of doing so much more than it did before.
Sketch a part profile on the touchscreen and Pathfinder automatically determines the best way to create the part. We call this feature **SmartPath™** automatic bend sequencing software. **SmartPath™** will save you time, eliminate guesswork and allow every operator to create parts easily and quickly with minimal training.

**NEW LIFE**

Extend the life of your machine

Older folding machines are durable and long-lasting, but their electrical control systems are not. Add 15-20 years of life to your machine with a simple upgrade to a Pathfinder controller.

**NEW PERFORMANCE**

Improve performance for a fraction of the cost of a new system

Pathfinder controls can fix problems with older machines as well as improve accuracy, speed, reliability and safety.

**NEW TRICKS**

Old machines can learn new tricks with Pathfinder controls

Pathfinder includes SmartPath auto-sequencing to automatically calculate the best sequence of bends to make each part, no matter how complicated. SmartPath creates a level playing field where every operator, regardless of experience, can operate the machine at the same advanced level.

With Pathfinder, your folding machine will also:
- Perform easy radius bends
- Integrate with the front office
- Have an unlimited part library

Pathfinder control systems are designed and manufactured in the U.S.
