

## YOUR OLD MACHINE...

Old folding machines like this Schechl are durable, but their electrical control systems aren't.

## ...HAS SOME NEW TRICKS

Pathfinder controls will give your folding machine new life, improve its performance and make it capable of doing so much more than it did before.

### NEW LIFE, NEW PERFORMANCE, NEW TRICKS

## NEW LIFE

### Extend the life of your machine

Retrofitting your existing Schechtl folder with a Pathfinder controller can add years to your machine's life while providing the most advanced folding machine features available.

## NEW PERFORMANCE

### Improve performance for a fraction of the cost of a new system

Pathfinder controls can fix problems with older machines as well as improve accuracy, speed, reliability and safety.

There is also no need to delete old parts from your library to make room for new ones because Pathfinder has an unlimited part library that can be shared between multiple machines.

## NEW TRICKS

### Old machines can learn new tricks with Pathfinder controls

Pathfinder includes SmartPath auto-sequencing to automatically calculate the best sequence of bends to make each part, no matter how complicated. SmartPath creates a level playing field where every operator, regardless of experience, can operate the machine at the same advanced level.

With Pathfinder, your folding machine will also:

- ⇒ Perform easy radius bends
- ⇒ Integrate with the front office
- ⇒ Have an unlimited part library

## SMARTPATH™

Sketch a part profile on the touchscreen and Pathfinder automatically determines the best way to create the part.

We call this feature **SmartPath™** automatic bend sequencing software. **SmartPath** will save you time, eliminate guesswork and allow every operator to create parts easily and quickly with minimal training.

Pathfinder control systems are designed and manufactured in the U.S.
